

REPORT
OF
Software Engineering Internship

Submitted
To
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By
Roll Number of Student: 2410030323
Name of Student: SHUBHAM MAURYA
Batch: 2024–28
2026–27

CANDIDATE'S DECLARATION

I, SHUBHAM MAURYA, do hereby declare that the internship report titled “Software Engineering Internship” has been prepared by me to fulfil the requirements of the Bachelor of Technology in Computer Science and Engineering. The report is based on my internship experience at Codizio Technologies Private Limited from 20th May 2026 to 20th August 2026.

The report presents the areas of work and learning stated in my internship completion certificate, including software development, Agile practices, frontend and backend development, databases, Git and GitHub, testing, cloud deployment concepts, microservices, Docker and technical documentation.

I affirm that the information presented in this report is prepared for academic submission and that the supporting internship certificate has been included as evidence.

Signature:

Student Name: SHUBHAM MAURYA

Roll No.: 2410030323

ACKNOWLEDGEMENT

I sincerely thank Codizio Technologies Private Limited for providing me the opportunity to work as a software engineering intern. The internship gave me exposure to different stages of software development and helped me understand how modern development teams work.

I am grateful for the learning experience in Software Development Life Cycle (SDLC), Agile practices, frontend and backend development, database management, version control, testing, deployment concepts, microservices, Docker and technical documentation.

I also express my gratitude to IILM University, Greater Noida, and the faculty members who supported my academic and professional development. I thank my family and everyone who encouraged me throughout the internship.

Signature:

Student Name: SHUBHAM MAURYA

Roll No.: 2410030323

CERTIFICATE FOR INTERNSHIP

Date: 29th August 2026

TO WHOMSOEVER IT MAY CONCERN

This is to certify that **Mr. Shubham Maurya** has successfully completed his internship at **Codizio Technologies Private Limited** as a **Software Engineering Intern** for the period from **20th May 2026 to 20th August 2026**.

During his internship, he actively worked on and explored the following areas:

Software Engineering Responsibilities:

- Software Development Life Cycle (SDLC) methodologies and Agile practices.
- Frontend development using HTML, CSS, JavaScript and React.js.
- Backend development using Node.js and REST API integration.
- Database management using MySQL and MongoDB.
- Version control and collaborative development using Git and GitHub.
- Code review practices and writing clean, maintainable code.
- Debugging, testing, and quality assurance of software applications.
- Deployment concepts using cloud platforms (AWS/GCP).
- Understanding of microservices architecture and containerization using Docker.
- Documentation and technical writing for software projects.

He demonstrated strong programming skills, problem-solving ability, and a professional attitude throughout his internship. His performance was commendable, and he proved to be a valuable member of the development team.

We wish him great success in all future professional endeavors.

Intern Details:

Name: Shubham Maurya | **Mobile:** 9341276775 | **UIDAI:** XXXX-XXXX-9066

Address: Delta-1, Block C, Greater Noida, Uttar Pradesh

Designation: Software Engineering Intern | **Duration:** 3 Months (20th May 2026 – 20th August 2026)

Warm regards,

SHAHBAZ ALAM, Director/CEO
Codizio Technologies Private Limited

This certificate can be verified online. Verify at: codizio.com/verify

Certificate Number - CDZ-2026-0802

4. PROJECT DESCRIPTION

The internship was completed at Codizio Technologies Private Limited as a Software Engineering Intern for a period of three months, from 20th May 2026 to 20th August 2026. The internship certificate dated 29th August 2026 confirms successful completion and describes the main areas explored during the internship.

The internship covered a broad software engineering workflow rather than one single technology. The certificate specifically mentions SDLC methodologies and Agile practices; frontend development with HTML, CSS, JavaScript and React.js; backend development with Node.js and REST API integration; MySQL and MongoDB; Git and GitHub; code review; debugging, testing and quality assurance; cloud deployment concepts using AWS/GCP; microservices and Docker; and technical documentation.

4.1 INTRODUCTION

Software engineering involves systematic methods for designing, developing, testing, deploying and maintaining software applications. A modern software project commonly uses multiple layers such as frontend interfaces, backend services, databases and deployment infrastructure.

During the internship, the student was exposed to these software engineering areas in an integrated manner. Frontend technologies were used to understand user-facing application development, while Node.js and REST APIs represented backend service development. MySQL and MongoDB provided exposure to relational and document-oriented database systems.

The internship also introduced collaborative development practices through Git and GitHub, code reviews and clean coding. Debugging, testing and quality assurance were included to improve software reliability. Cloud deployment concepts, microservices and Docker extended the learning toward modern application deployment.

4.2 ORGANIZATION PROFILE

Codizio Technologies Private Limited is the organization named on the internship certificate. The certificate lists its address as B-1392 TOP/F Back Side, Old N B-372, Ashok Nagar, East Delhi, Delhi, India 110096. The certificate identifies Shahbaz Alam as Director/CEO.

The internship certificate provides the organizational details and the areas of software engineering work covered during the internship. This report does not add unverified claims about the company's size, clients, products or internal business operations.

4.3 INTERNSHIP WORK AREAS

Table 4.1: Internship work areas stated in the certificate

Area	Learning / Responsibility
SDLC & Agile	Understanding software development lifecycle methodologies and Agile practices.
Frontend	Development concepts using HTML, CSS, JavaScript and React.js.
Backend	Backend development using Node.js and REST API integration.
Databases	Database management using MySQL and MongoDB.
Version Control	Collaborative development using Git and GitHub.
Code Quality	Code review practices and clean, maintainable code.
Testing & QA	Debugging, testing and quality assurance of applications.
Cloud	Deployment concepts using AWS/GCP cloud platforms.
Microservices & Docker	Understanding microservices architecture and containerization.
Documentation	Technical writing and documentation for software projects.

4.4 OBJECTIVES

- Understand the Software Development Life Cycle and Agile development practices.
- Gain practical exposure to frontend development using HTML, CSS, JavaScript and React.js.
- Understand backend development using Node.js and REST API integration.
- Learn database management concepts using MySQL and MongoDB.
- Understand version control and collaborative development using Git and GitHub.
- Develop awareness of code reviews and clean, maintainable coding practices.
- Understand debugging, software testing and quality assurance.
- Learn basic deployment concepts using cloud platforms such as AWS and GCP.
- Understand the role of microservices architecture and Docker containerisation.
- Improve technical documentation and communication skills.

4.5 SCOPE

The scope of the internship covered multiple stages of software engineering. It included application development, database management, collaborative coding, quality assurance and deployment concepts.

The frontend scope included HTML, CSS, JavaScript and React.js. Backend learning included Node.js and REST API integration. Database exposure included both MySQL and MongoDB. Git and GitHub were used as the stated version-control and collaboration technologies.

The scope also extended beyond coding to include code review, debugging, testing, cloud deployment concepts, microservices, Docker and technical writing. Together, these areas provide a foundation for understanding a complete modern software development workflow.

4.6 TECHNOLOGIES AND TOOLS

Table 4.2: Technologies mentioned in the internship certificate

Technology / Tool	Purpose / Role
HTML	Structure of web pages and frontend interfaces.
CSS	Styling and layout of web interfaces.
JavaScript	Client-side programming and web application behavior.
React.js	Component-based frontend application development.
Node.js	Backend/server-side JavaScript development.
REST API	Integration and communication between application services.
MySQL	Relational database management.
MongoDB	Document-oriented database management.
Git	Version control and change tracking.
GitHub	Collaborative source-code hosting and development.
AWS / GCP	Cloud deployment concepts.
Docker	Containerization of applications and services.

4.7 SYSTEM / DEVELOPMENT ARCHITECTURE

A conceptual architecture can be formed from the work areas listed in the certificate. A user interacts with the frontend application. The frontend communicates with backend services through REST APIs. Backend services work with databases such as MySQL or MongoDB. Version control and collaboration are managed through Git and GitHub. Applications can be containerized using Docker and deployed using cloud platforms such as AWS or GCP.

Table 4.3: Conceptual software engineering architecture

Layer	Components / Role
Presentation Layer	HTML, CSS, JavaScript, React.js
Application Layer	Node.js backend and REST API integration
Data Layer	MySQL and MongoDB
Development & Collaboration	Git, GitHub and code review
Quality Layer	Debugging, testing and quality assurance
Deployment Layer	Docker and cloud deployment concepts using AWS/GCP
Architecture	Microservices concepts for distributed application services
Documentation	Technical documentation and writing

Conceptual flow: User → React.js Frontend → REST API → Node.js Backend → MySQL / MongoDB. Development changes are managed with Git/GitHub, while Docker and cloud platforms support deployment concepts. Testing, review, security and documentation are considered throughout the workflow.

4.8 METHODOLOGY

Step 1 – SDLC and Agile: Understand the software development lifecycle and Agile approach to organizing development work.

Step 2 – Frontend Development: Study and practice frontend concepts using HTML, CSS, JavaScript and React.js.

Step 3 – Backend Development: Understand server-side development with Node.js and integration through REST APIs.

Step 4 – Database Management: Work with the concepts of relational data in MySQL and document data in MongoDB.

Step 5 – Version Control: Use Git and GitHub concepts for tracking changes and collaborative development.

Step 6 – Code Quality: Understand code review and practices for clean and maintainable software.

Step 7 – Testing and Debugging: Identify issues, test application behavior and support software quality assurance.

Step 8 – Deployment: Study cloud deployment concepts using AWS/GCP and understand Docker-based containerization.

Step 9 – Architecture and Documentation: Understand microservices concepts and prepare technical documentation for software work.

This methodology is derived from the areas explicitly listed in the internship certificate. The certificate does not provide the names of individual assignments, repositories or deployed applications, so this report describes the workflow at the internship-learning level.

4.9 LEARNING OUTCOMES

- Understanding of SDLC methodologies and Agile practices.
- Improved knowledge of frontend development and React.js.
- Understanding of backend development using Node.js and REST APIs.
- Exposure to both MySQL and MongoDB database management.
- Understanding of collaborative development with Git and GitHub.
- Awareness of code review and clean-code practices.
- Improved understanding of debugging, testing and quality assurance.
- Basic understanding of cloud deployment concepts using AWS/GCP.
- Understanding of microservices architecture and Docker containerization.
- Improved technical documentation and professional software engineering skills.

Overall Learning Summary

The internship provided a broad view of modern software engineering. It connected application development with databases, version control, testing and deployment. Working across frontend and backend concepts helped demonstrate how different parts of a software system communicate and depend on one another.

The exposure to Git/GitHub, code reviews, testing, Docker, microservices and cloud deployment concepts also highlighted that software engineering is not limited to writing code. Collaboration, quality assurance, maintainability, deployment and documentation are important parts of delivering software professionally.

4.10 CERTIFICATE AND OTHER COMMUNICATION PROOF

The internship completion certificate is dated 29th August 2026 and confirms that Shubham Maurya successfully completed the internship at Codizio Technologies Private Limited as a Software Engineering Intern from 20th May 2026 to 20th August 2026.

The certificate also records Certificate Number CDZ-2026-0802 and identifies Shahbaz Alam, Director/CEO, as the signatory. The certificate includes the internship responsibilities and states that the intern demonstrated programming skills, problem-solving ability and a professional attitude.

No separate email or communication proof was supplied with the certificate file. Therefore, the certificate is included as the primary completion evidence.
